

BHAVISHYA KUMAR

Computer Science Student · AI-Assisted Full-Stack Developer

+91 9068188593 | kumarbhavishya384@gmail.com | Uttar Pradesh, India
[GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Motivated Computer Science undergraduate with a strong bias toward building and shipping real products. Grounded in Python, C, and frontend development, and highly effective at using AI-powered tools to plan, build, deploy, and debug full-stack applications end to end. Independently delivered three live projects — a carbon-footprint intelligence platform, a medical eye-disease detection tool, and a crop-recommendation system — and contributed to LIFEINTRA AI, a production ICU-management SaaS platform at Spin Digital Pvt. Ltd. Completed a certified 45-day social internship at Ved Daksha Foundation. Currently deepening core CS and ML fundamentals to grow from an AI-assisted builder into an independent software engineer.

EXPERIENCE

Machine Learning & Web Developer Intern

Spin Digital Pvt. Ltd. — Technology & Innovation

Jun 2026 – Aug 2026

Noida, Uttar Pradesh

- Contributed to **LIFEINTRA AI**, a full-stack, multi-tenant, AI-powered ICU-management SaaS platform in active production use, working alongside the core product team.
- Built **role-based portals** for Super Admin, Hospital Admin, Doctor, Nurse, and Patient Family, including API-contract design and automatic patient-to-nurse assignment logic.
- Resolved critical **data-persistence bugs** and implemented branding updates and the platform's dark-themed glass-morphism design system for a consistent clinical interface.
- Assisted with **machine-learning model development** — training, testing, and deployment — as part of the production feature set.

Web Developer & Data Analyst Intern

Ved Daksha Foundation — 45-Day Certified Social Internship

Jun 2026 – Jul 2026

Ghaziabad, Uttar Pradesh

- Completed a **45-day certified social internship** (8 June – 31 July 2026) spanning website development, data analysis, and digital-literacy training.
- Designed, built, and deployed a **full-stack NGO website** end to end — from planning through live deployment — while working within a strict budget.
- Certified across three roles:** Website Developer, Data Analyst, and Digital Literacy Trainer.

PROJECTS

LIFEINTRA AI — AI-Powered ICU Management SaaS Platform

- Multi-tenant, full-stack ICU-management platform with role-based portals for Super Admin, Hospital Admin, Doctor, Nurse, and Patient Family.
- Designed API contracts and automatic patient-to-nurse assignment logic; rebuilt portal interfaces and resolved data-persistence issues in production.

Tech Stack: HTML/CSS/JavaScript, Chart.js, Font Awesome 6, AOS.js

Vision Guard AI — AI-Powered Eye-Disease Detection Platform

- Dual-platform medical-AI application: a Flask web app serving a trained **TensorFlow deep-learning model** for retinal-scan classification.
- Classifies scans into four categories — Normal, Cataract, Glaucoma, and Retinal Disease — each with a **confidence score**.
- Features live webcam capture via OpenCV, drag-and-drop upload, per-account scan history, and a Disease Information Center.
- Includes a **Nearby Ophthalmologists finder** using IP geolocation and OpenStreetMap to surface clinics within a 50 km radius.

Tech Stack: TensorFlow/Keras, Flask, SQLite, OpenCV, Python, HTML/CSS/JavaScript

Eco Track AI — AI-Powered Carbon Footprint Intelligence Platform [**Live in Production**]

- Full-stack web application tracking personal carbon emissions across transport, electricity, and food, generating a real-time **EcoScore (0–800)**.

- AI chatbot powered by **Groq / Llama 3.3** that auto-logs activities from plain-English conversation, plus an AI food-image scanner that estimates footprint from meal photos.
- Includes a 30-day ML emissions forecast, campus leaderboard, daily reminders, carbon-offset calculators, and a government-data transparency portal.

Tech Stack: *Python, Flask, MongoDB Atlas, Groq AI, Scikit-learn, JavaScript, HTML/CSS*

FarmAi — AI-Powered Smart Farming & Advisory Platform

- Full-stack agricultural-AI platform combining **crop recommendation**, **plant-disease detection**, and **fertilizer advisory** into a single decision-support tool for farmers.
- Trained a **crop-recommendation model** on soil parameters (N, P, K, pH) and environmental conditions to suggest the most suitable crop for a given field.
- Built a **deep-learning disease-detection module** that classifies plant-leaf images and uses **Grad-CAM** heatmaps to visually explain which regions drove each diagnosis.
- Integrated an **AI assistant / chatbot** for natural-language farming queries, plus **responsible-AI components** — a fairness audit and an explanation engine — for transparent, accountable predictions.
- Delivered a farmer dashboard with authentication and prediction history, containerized with **Docker** for reproducible deployment.

Tech Stack: *Python, Flask, Scikit-learn, TensorFlow/Keras, OpenCV, React, Docker*

TECHNICAL SKILLS

Python — Core syntax, variables, loops, functions, file handling, and scripting.

Frontend — HTML structure, CSS styling, page layouts, forms, and JavaScript basics.

DSA (C) — Arrays, linked lists, stacks, queues, basic sorting, and searching.

AI-Assisted Development — Planning, building, debugging, testing, and shipping complete projects with AI development tools.

ML Foundations — Basic machine-learning algorithms and neural-network concepts.

Tools & Cloud — Git/GitHub, Flask, MongoDB Atlas, SQLite, Netlify, and Formspreet.

Note: Advanced technologies in the projects above were implemented through AI-assisted development. I understand the underlying concepts, can navigate and modify these codebases, and am actively studying them in depth to build them independently.

EDUCATION

B.Tech, Computer Science Engineering — DBS Global University

2025 – 2029
Selaqui, Dehradun, Uttarakhand

Class XII — Science (PCM), Saraswati Vidya Mandir

2025
Khurja, Uttar Pradesh

ACHIEVEMENTS & HIGHLIGHTS

- Built and deployed **three complete AI-assisted projects** as a first-year CS student, demonstrating initiative and rapid learning.
- **Vision Guard AI** runs a trained deep-learning model for medical image classification across web and desktop environments.
- **Eco Track AI** is live in production with a cloud database, automated notifications, and an integrated LLM chatbot.
- Completed a **certified 45-day social internship** at Ved Daksha Foundation across web development, data analysis, and digital literacy.
